

Snow Load Disclosure for *Manufactured Home Installation* Permit Applicants

Manufactured housing is to be "constructed" to meet a 30psf roof live load (snow load), in accordance with HUD standards. However, a protective roof covering, meeting the local snow load requirement of 55psf may be required for homes not constructed for a 55psf roof live load (snow load). The protective roof covering requirement may be waived for homes that were constructed with a minimum of a 55psf roof live load (snow load). Snow loads are not inclusive of any other live or dead loads that may apply.

Site Specific Snow Load = Minimum 55psf
